Side Projects

VipFicated
Product Lead

Designed and led the development of a gateway solution for second-hand e-commerce platforms, enabling end-to-end verification of high-value items across the transaction life-cycle.
Acted as Software Architect & Development Lead, defining architecture and guiding the engineering team to ensure scalable, high-quality delivery.
Contributed to product and business strategy, and presented the solution to investors.

Portfolio

Experience

2019 - 2024 Remote
Product Engineer / Manager
Empathy

Combined hands-on technical expertise with strategic product leadership. Led the development of a high-availability SaaS and on-premise platform for data ingestion, processing, and retrieval, serving global retailers such as ITX and Kroger.
Contributed to 300%+ ARR growth, expanded adoption across industries and international markets, and worked across technologies such as ElasticSearch/Solr, major cloud platforms (AWS, GCP, Azure), big data streaming, and generative AI.
Acted as a key bridge between technical execution and product strategy to deliver scalable, client-focused solutions.

2018 - 2019 Asturias, Spain
Software Engineer (R&D)
Treelogic

Progressed from Software Engineer to Product Owner on a Eurozone-funded research project focused on improving safety in conflict zones through intelligent navigation technology.
Contributed across the full stack—spanning infrastructure, backend systems, and user-facing applications—to develop a navigation app integrated with in-car cameras.

2016 - 2018 Asturias, Spain
Software Engineer
Partner Tecnologico

Developed desktop business applications for regional industry leaders to monitor and manage truckloads of construction materials, improving operational efficiency and traceability. Built solutions using .NET and complemented them with lightweight Android tools to support real-time communication and process tracking between field and office teams.

2014 - 2016 Asturias, Spain
Full-stack developer
Neozink, Obice

Completed 2 internships as full-stack developer, contributing to new features and maintenance of web applications and a basic ERP system for construction companies within a LAMP environment. Worked across the stack using PHP (ScriptCase and CakePHP), HTML5, CSS3 (Sass), JavaScript, jQuery, and WordPress, building responsive interfaces and CMS functionalities. Also supported hosting, security, and day-to-day operational maintenanc
